

**‘WANNABEES’ PRESENTING:
RICARDA, NATASHA, Y RAY, JU MYNN AND BOWANG**

TO MAKE THE CLASSROOM A MORE CUNDUCTIVE ENVIRONMENT

Brief Description:

- Hello! We are Wannabees. Our group members are, Ricarda, Natasha, Ju mynn, Y ray and Bowang. Our leader is; Ricarda.
- Our group has two proteotype; Hoppy Loop and Caps' on chairs. Other than that, I will be sharing a brief description!
- Our main point is to have a better environment in the classroom and by doing so, we did project that will make our classrooms environment much more conducive.
- “Hoopy Loop”: This project is to prevent people from throwing rubbish on the floor.
- “Caps' on chairs”: This project is to prevent students like me to stop dragging the chairs and even if we drag it still wont make a lot of noise.

1st Project: “Hoopy Loop”

Description;

- This picture of the hoop we made is to encourage our classmates to have the courage to throw rubbish into the bin. This is because, people in Singapore are very irresponsible . Therefore, doing this project will make people more interested in throwing the rubbish and having us throw rubbish in the bin will make a better environment for all of us. It is also a very fun way for people to throw the rubbish since it is suppose to go into the hoop!

2nd Project: “Caps’ on chairs”

Description;

- As you can see there are ‘4 caps’ on the chair legs. This is because, students regularly drag their chairs and for me it is annoying. Therefore by doing this, when we push or drag the chairs it will not make any noises. This project also helps us save the environment by making use of the reduce items. If the caps break, students can use any of their bottle caps if they bought any water bottles.

That's the end of our slides!

Thank you for listening
